

CORRUGATED TANKS ARE...

- ✗ NOT AN OPTION FOR NFPA 22 COMPLIANT TANKS
- ✗ NOT AWWA COMPLIANT

DON'T RISK TANK FAILURE!

It is important for Fire Protection water tanks to remain in operation after a catastrophic event such as a storm or earthquake, so having the right storage equipment on hand is not just a good idea, it can be the law!

- ✔ NFPA 22 compliance requires AWWA D103 Design & Construction for bolted tanks
- ✔ Corrugated is specifically excluded from the D103 Standard
- ✔ AWWA D103-09 and now D103-19 specifically states Corrugated is NOT an option
- ✔ Currently there is no AWWA standard for corrugated storage tanks, nor have corrugated tanks been accepted or approved by AWWA in any way

*Be a responsible citizen and specifier.
People's lives are counting on it!*
